## Care and Attention for Supermatt Colours

1. If surface gets stain, please pat softly by using wet cloth or cloth which has been soaked in neutral detergent (ex. dishwashing soap) as soon as possible.

2. When the stain starts to exude, please pat softly again to dry off by using dry cloth.

3. Please repeat this procedure until the stain looks less visible.

※ Even if cleaning is done by water or neutral detergent (ex. dishwashing soap), scrubbing strongly may damage the surface.

※ If stain is left on the surface for a long time, it gets harder to be cleaned out.
